44MM TOURBILLON

TECHNICAL SPECIFICATIONS

A PEEK INSIDE MECHANISMS

First movement imagined and manufactured by HYSEK, the Abyss Tourbillon is a visual and technical marvel, a piece of character with a robust and asserted look. Its very sophisticated conception requires a high-end technical know-how and reflects the passion of watchmakers wishing to bring to their secular art an asserted modernity.

Not hiding anything of its great complexity, the HYSEK calibres HW03 and HW03A show an incredible flying tourbillon, whose carriage has been worked in three dimensions and reveals a wonderful titanium balance. The semi-instantaneous grande date at 3 o'clock exploits for its discs some advanced aluminium alloys limiting in this way the inertia during the rotation. Intensely unique, this calibre proposes also a power reserve indicator and uses no classical finishing's code, like on the winding weight specifically trimmed so as to become a subliminal and personal signature.

Respectfully discreet against the complexity of the mechanism, the sapphire dial of the manual-winding version disappears on the automatic version.

And as all exceptional objects require rare involvement, this outstanding instrument dives into the heart of the matter to extract the substance by playing the interest that can make mixtures of metals for complex coverings. Offered in limited editions of 30 pieces, the Abyss Tourbillon Automatic is proposed in 18k rose gold, while the manual-winding calibre is housed in a titanium case. Both versions are adorned with black titanium horns, prolonged by an articulated rubber strap with H insert. A double security fold-over buckle strengthens the contemporary and virile side of the timepiece.

Transparent but not skeleton, liberated from the classical constraints but not indecent, the Abyss Tourbillon offers a new perception of time.

HW03 manufactured movement

- HYSEK calibre HW03
- Hand-wound movement
- Flying Tourbillon 1rd/minute
- Titanium balance
- Shot-blasting bridges
- Escapement manufactured by HYSEK
- 338 components
- 28 jewels
- Hour and minute
- Semi-instantaneous grande date
- Mass sector in 22K rhodium-plated Gold
- Power reserve indication
- Autonomy: 75 hours ± 3h
- Frequency: 28'800 Vph

Case

- Titanium case
- Size: Ø44mm x L63mm x H18mm
- Horns in black Titanium
- Screwed crown
- Bezel in tinted sapphire
- Sapphire glass with anti-reflection
- Water Resistance: 30 meters

- Sapphire dial
- Articulated strap in rubber
- H inserts in Titanium
- Alligator bracelet on request
- Double security fold-over buckle

- Limited edition: 30 pieces

HW03A manufactured movement

- HYSEK calibre HW03A
- Automatic Mechanical
- Flying Tourbillon 1rd/minute
- Titanium balance
- Shot-blasting bridges
- Escapement manufactured by HYSEK
- 467 components
- 31 jewels
- Hour and minute
- Semi-instantaneous grande date
- Mass sector in 22K rhodium-plated Gold
- Power reserve indication
- Autonomy: 68 hours ± 3h
- Frequency: 28'800 Vph

Case

- 18K Rose Gold and Titanium case
- Size: Ø44mm x L63mm x H18mm
- Horns in black Titanium
- Screwed crown
- Bezel in tinted sapphire
- Sapphire glass with anti-reflection
- Water Resistance: 30 meters

- Galvanic skeleton dial
- Articulated strap in rubber
- H inserts in Gold
- Alligator bracelet on request
- Double security fold-over buckle

- Limited edition: 30 pieces
