KILADA HESPEROS

Hesperos KILADA, *HYSEK*'s latest "Haute Horlogerie" creation, enriches the complication offer of the brand.

This dual time GMT retrograde tourbillon is the culmination of a singular and creative research; it allies the excellence and refinement of the Swiss traditional watch-making and offers a unique design and a strong personality, in line with *HYSEK*'s spirit and style.

Highly precise manufactured movement, tourbillon Hesperos offers new aesthetics and finishing. Its personalization has been highly worked on, with a bridge that identifies the brand. The combination of the second time zone with the annual calendar allows a clear and harmonious legibility of the hour, minute and second indications.

The finishing of the movement has been so accurately worked on, that it justifies the optimum opening of the backside sapphire glass in order to appreciate the details of the mechanism.

The original research of transparency was the milestone for the conception of this model. The sapphire dial enhances the movement and its functioning, to its ultimate gear-train. A particular attention has been dedicated to the decoration of its plates and bridges linking the gear-train, which reinforces the personality of the model.

The lateral parts of the watch-case integrate a sapphire bridge reminding of the case's transparency.

The whole was created strictly in respect to *HYSEK*'s style, with extremely pure, architectural and recognizable lines together with a high tech resonance combined with extreme watchmaker sophistication.

The name "HESPEROS" finds its inspiration in the Greek mythology which was largely dedicated to time, precisely, the name of the model means: "The God of Time".

The top quality, hand sewed alligator bracelet of the Kilada HESPEROS is secured by a double fold over buckle exclusive to *HYSEK*.

The Kilada HESPEROS tourbillon is manufactured in 18K rose or white gold under a limited edition of 20 pieces.

TECHNICAL ASPECTS

- Mechanical and rectangular movement with tourbillon
- Manufactured and customized by HYSEK
- Movement with 305 components
- Mechanical movement with manual winding up
- Frame rotation of the tourbillon in 1 minute
- Frequence : 21'600 vibration per hour
- Staff of transmission with conic pinions for winding up
- 28 jewels
- Bridge customized by HYSEK
- Power reserve : 80h

- 18k white or rose gold
- Glass sapphire
- Coloured and anti-reflection sapphire dial
- Size : 60 x 43 x 16 mm
- Water resistance : 50 meters

-Rubber (or hand sewed Alligator, only for the kilada hesperos) with 18k white or rose gold fold over buckle
